No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 81,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                780
                                                      The invention relates to a novel human tumour antigen protein, ART-1. Included in the invention are polynucleotide sequences encoding the ART-1 proteins which when broken down intracellularly produce a tumour antigen peptide that can recognise HLA antigen and bound cytotoxic T cells. Antibodies which specifically recognise ART-1 and its derivative peptides, are also included in the invention. ART-1 exhibits cytostatic activity. The tumour antigen peptide originating from it, their derivatives, and DNAs are applicable in vivo or in vitro as remedies, preventives and

AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibatcerial; endocrine; cardiant; central nervous system; virucide; antibatcerial; endocrine; cardiant; central nervous system; virucide; antibatcerial; endocrine; cardiant; central nervous system; virucide; anti-HIV; fungicide; antimutagen; cardiovascular; antianaemic; antiagregant; haemostatic; vulnerary; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; den therapy, antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective antidiapetic; cytostatic; neuroprotein and polynucleotides are useful for screening for groduction, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis; cof disorders associated with the activity of a protein e.g. inflammation, reuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, caneemia, platelet disorders, thrombocytopeenia, wounds, burns, ulcers, csteoporosis, severe combined immunodeficiency, eczema, allergic hintis, asthma, diabetes, cancer, multiple sclerosis, depression, and allergic and antidiatics.
                                                                                               Human; cancer; ulcer; HIV infection; human immunodeficiency virus;

antibiflammatory; antirheumatic; antiarthritic; immunosuppressive;

antibacterial; endocrine; cardiant; central nervous system; virucide;

antibacterial; endocrine; cardiovascular; antianaemic; anaemia;

antigagregant; haemostatic; vulnerary; antiulcer; osteopathic; eczema;

dermatological; antiallergic; antiathmatic; cytostatic;

neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic;

munostimulant; gene therapy; antisense therapy; vaccine; inflammation;

immunostimulant; gene therapy; antisense therapy; vaccine; inflammation;

cardiac dysfunction; neuropathology; cardiac anaphylaxis; autoimmunity;

Polynucleotide sequences AAC80531-C80580 represent cDNA encoding human secreted proteins AAB45120-B45169. Sequences AAB45170-B45255 represent alternative polypeptides encoded by the genes, and amino acid sequences to which they are homologous. The genes and proteins have activities to dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive; antiarthritis; cardiant; vasotropic; vasotropic; cardiant; vasotropic; v

ţ Novel protective sequence polynucleotides and polypeptides, used to identify modulators of their expression and activity, which are used to treat central nervous system conditions, diseases and disorders -

Example; Fig 1C; 325pp; English.

protect against call death (i.e., apoptosis or necrosis). Sequences which protect against call death (i.e., apoptosis or necrosis). Sequences which the part of the call death (i.e., apoptosis or necrosis). Sequences AARB4132, AARB4145, AARB4100, AARB4210, AARB4215, AARB4145. AARB4100, AARB4210, AARB4215, AARB4145. AARB4100 in the call death of the call of these cDNA clones. Sequences while the remaining nucleic acid sequences within the range given above represent the polypeptides encoded by the call death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic pathways when injected into a call predisposed to or undergoing call death, protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with call death, and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an artibody, a ribozyme, or an antisense molecule, can also be used to treat the central nervous system including psychiatric or neurological disorders, especially ischemia-related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, the modulators may also be used to treat infections such as include the retingence of the canting of diseases. The modulators may also be used to treat infections such as include the carbination of the canting to such as ischaemia related conditions such as such as cancers or benign tumours, blood collitors such as asthma or chronic obstructive pulmonary degeneration; hypertension; myocardial infarction; atherosclerosis; respiratory conditions such as asthma or chronic obstructive pulmonary degenerations because an anaemia; gastrointestinal conditions such as anaemia; gastrointestinal conditions such as anaemia; gastrointestinal conditions such as gastwa end and an anaemia agastrointestinal conditions such as gastwa end and an anaemia agastrointestinal conditions such as gastwa end and an anaemia agastr endometriosis; endocrine disorders such as Grave's disease or Hashimoto's thyroiditis; skin conditions such as dermatitis or urticaria; or immune Sequences AAH84132-AAH84370 represent human nucleic acid sequences which

Sequences AAH84132-AAH84370 represent human nucleic acid sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences CC AAH84132, AAH84145, AAH84170, AAH84210, AAH84226, AAH84256, AAH84281, AAH84115, AAH84116, AAH84210, AAH84210, AAH84216, AAH84216, CC AAH84211, AAH84135 and AAH843167 represent 10 full-length CDNA clones, while the remaining nucleic acid sequences within the range given above represent the open reading frames (ORFS) of these CDNA clones. Sequences AAG98610-AAG98827 represent the Polypeptides convected by the cell death protective CDNA clones are able to protective ORFS. The cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic companies and treatment of disorders and polypeptides can be companied to compounds which modulate their activity or certain the diagnosis and treatment of disorders associated with cell death, and to screen for compounds which modulate their activity or certain compounds which modulate their activity or certain for compounds which modulate their activity or antibody, a ribozyme, or an antisense molecule, can also be used to treat contral nervous system including psychiatric or neurological disorders such as strokes, and also includes Teurodegenerative disorders such as Alzheimer's disease, cused to treat infections such as meningitis, malaria, or trypanosomiasis; conference of treat infections such as disbetic retinopathy or macular celegeneration; hypertension; myocardial infarction; atherosolerosis; respiratory conditions such as centered or present or parking the contral contral conditions such as an entreal contral cont disease; neoplastic conditions such as cancers or benign tumours; blood cell conditions such as anaemia; gastrointestinal conditions such as pastrative colitis; liver conditions such as biliary cirrhosis; kidney disorders such as glomerulonephritis; cystitis; endometriosis; endocrine disorders such as Grave's disease or Hashimoto' thyroiditis; skin conditions such as dermatitis or unticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). nucleic acids may additionally be used to generate animal models of cell death-associated disorders. The present sequence represents a nervous system conditions, diseases and disorders Claim 2; Fig 6A; 325pp; English. cell death protective ORF. central ç

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell transformed with the vector, the proteins encoded by the cansformed with the vector, the proteins encoded by the polynucleotides, antibodies that bind to the proteins and identification of modulators of the proteins or the expression of the polynucleotide. The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and isolation of full length cDNA and genomic DNA. The polynucleotides and isolation of full length cDNA and genomic DNA. The proteins are also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders cutoimmune disorders (e.g. rheumatoid arthitis, multiple scalerosis, autoimmune thyroiditis and diabetes) and allergic reactions and cutoimmune thyroiditis and diabetes) and allergic reactions and usease, conditions (e.g. asthma). They are also useful for treating one togenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coaquiation disorders (e.g. neemophilia), inflammatory disorders (e.g. crohd's disease) and tumours. They are also useful for resultating haematopolesis, for treating myeloid or lymphoid cell registration condition is one of the 625 CDNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     583
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  703

Novel protective sequence polynucleotides and polypeptides, used to identify modulators of their expression and activity, which are used to treat central nervous system conditions, diseases and disorders -

in

Sequences AAH84132-AAH84370 represent human nucleic acid sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences AAH84121, AAH84126, AAH84265, AAH844281, AAH84126, AAH84265, CC AAH84212, AAH84126, AAH84210, AAH84226, AAH84226, AAH844281, AAH84413, AAH84413, AAH84413, AAH84413, AAH84420, AAH84426, SC AAH844281, AAH844315 and AAH84367 represent 10 full-length cons. Sequences while the remaining nucleic acid sequences within the range given above consecutive ORFs. The cell death protective consecutive ORFs. The cell death protective consecutive ORFs. The cell death protective consecutive or necrotic pathways when injected into a cell predisposed to or undergoing cell cath. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death, and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an antisones molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia-related conditions such as Strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, cused to treat infections such as meningitis, malaria, or trypanosomiasis; vascular diseases such as ischemic encephalopathy or cerebral conditions; eye conditions such as asthma or chronic obstructive pulmonary attact or expression; hypertension; myocardial infarction; atherosclerosis; cespinal paragraphy or macular diseases necessing each as asthma or chronic obstructive pulmonary attach as asthma or chronic or hadron the pulmonary attach as asthma or chronic or hadron the pulmonary attach as asthma or chronic or hadron the pulmonary attach as asthma or chronic or hadron the pulmonary attach as asthma or chronic or hadron the pulmonary attach. disease; neoplastic conditions such as cancers or benign tumours; blood

cirrhosis, kidney disorders such as glomerulonephritis; cystitis; endometriosis; endocrine disorders such as Grave's disease or Hashimoto' thyroiditis; skin conditions such as dermatitis or urticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may additionally be used to generate animal models of cell death-associated disorders. The present sequence represents a cell conditions such as anaemia; gastrointestinal conditions such as gastritis or ulcerative colitis; liver conditions such as biliary cell death protective ORF. 8888888888×8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel human nucleic acid (cDNA) sequences (A), that are highly expressed in uterine tumour tissue and which have anticancer and cytostatic activity. (A) are used (1) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of uterine or endometrial cancer; (ii) directly for treating these forms of cancer. (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTS from different libraries may represent different parts of the same unknown gene, distorting the estimated configuration of currence in a particular tissue. AAZ41981_X4121 represent EST fragments derived from a human endometrium tumour cDNA library which encode the protein sequences represented in AAX59941-x60328.

protect against cell death (i.e., apoptosis or necrosis). Sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences of AH84132-AH84105, AAH84201, AAH84205, AAH84205, AAH84201, AAH84201, AAH84205, AH84205, AH84201, AAH84201, AAH84301 caid sequences within the range given above represent the perfected within the range given above represent the polypeptides encoded by the cell death protective cDNA clones are able to protective ORFS. The cell death protective cDNA clones are able to protective ORFS. The cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic soids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death. and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an antibody, a ribozyme, or an antisense molecule, can also be used to treat the central nervous system including psychiatric or neurological classofars, especially ischaemia-related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, undergon's disease. The modulators may also be used to treat infections such as meningitis, malaria, or trypanosomiasis;

                                                                 The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORE has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences cDNA sequences have been obtained, the full 5' GTR is are longer 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment

Sequences AAH84132-AAH84370 represent human nucleic acid sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences AAH84121, AAH84120, AAH84120, AAH84255, AAH84120, AAH84120, AAH84120, AAH84255, AAH841281, AAH84120, AAH84120, AAH84255, AAH841281, AAH841315 and AAH84130, AAH84315 and AAH84367 represent the follows of the construction of the remaining nucleic acid sequences within the range given above CC represent the pollopeptides encoded by the cell death protective on construction of protective ORFs. The cell death protective construction of prevent, delay or rewerse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death, and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, and the central nervous system including psychiatric or neurological calsorders, especially ischaemia-related conditions such as strokes, and also includes neurodegenerative diseases include those associated with cell calsorders, especially ischaemia-related conditions such as strokes, and also includes neurodegenerative diseases. The modulators may also be used to treat infections such as meningitis, malaria, or trypanosomiasis, recovered to treat infections such as meningitis, malaria, or trypanosomiasis, recovered to treat infections such as meningic and an analyzane or recovered to the second as meningic and the protections and also be also the contral calcolations such as meningic and also the calcolations and second as meningic and also the calcolations and also also the calcolations and also a vascular diseases such as inchemic encephalopathy or cerebral infarction; eye conditions such as diabetic retinopathy or macular diseases such as sichemic encephalopathy or macular infarction; eye conditions such as asthma or chronic obstructive pulmonary disease; neoplastic conditions such as cancers or benign tumours; blood cell conditions such as cancers or benign tumours; blood gastritis or ulcerative colitis; liver conditions such as placent conditions such as anaemia; gastrointestinal conditions such as cirrhosis; kidney disorders such as glomerulonephritis; cystitis; endometriosis; endocrine disorders such as grave's disease or Hashimoto's thyroiditis; skin conditions such as dermatitis or urticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may additionally be used to generate animal models of cell death-associated disorders. The present sequence represents a cell death protective ORF. Claim 2; Fig 6M; 325pp; English.

(HUMA-) HUMAN GENOME SCI INC

Ruben SM; Rosen CA, Barash SC,

WPI; 2001-565190/63. P-PSDB; AAU86776.

Nucleic acid encoding novel connective tissue associated polypeptides, used in diagnosing, preventing, treating or ameliorating a disorder such as cancer or rheumatoid arthritis -

Claim 4; SEQ ID No 352; 673pp; English.

The present invention relates to the isolation of novel human connective tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (cDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK41613-ABK41611 represent cDNA sequences encoding the novel human connective tissue related polypeptides.

Once: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

Sequences AAH84132-AAH84370 represent human nucleic acid sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences CC protect against cell death (i.e., apoptosis or necrosis). Sequences CC AAH84281, AAH84126, AAH84126, AAH84126, AAH84281, AAH84126, AAH84126, AAH84281, AAH84135, and AAH84130, AAH84281, AAH84135, AAH84135, and AAH84130, AAH84281, AAH84281, AAH841315 and AAH84367 represent 10 full-length cDNA clones. Sequences while the remaining nucleic acid sequences within the range given above represent the open reading frames (ORFs) of these cDNA clones. Sequences AAG9810-AAG98109 represent the polypeptides encoded by the cell death protective only contective on reverse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell campinody, a ribozyme, or an antisense molecule, can also be used to treat central nervous system including psychiatric or neurological disorders, especially ischaemia-related conditions such as strokes, and also anticludes neurodegenerative disorders such as Alzheimer's disease, cused to treat infections such as meningitis, malaria, or trypanosomiasis; vascular diseases such as ischaemic encephalopathy or cerebral conditions such as asthma or chronic obstructive pulmonary degeneration; hypertension; myocardial infarction; atherosclerosis; resplanters conditions such as asthma or chronic obstructive pulmonary degeneration; hypertension; myocardial infarction; atherosclerosis; cell conditions such as asthma or chronic obstructive pulmonary degenerations when as asthma or chronic obstructive pulmonary conditions with as a such as dispensed or cell conditions such as astences or benigh tumous; such as aneamia; liver conditions such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1429
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1489
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1549
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    endometriosis; endocrine disorders such as Grave's disease or Hashimoto's thyroiditis; skin conditions such as dermatitis or urticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may additionally be used to generate animal models of cell death-associated disorders. The present sequence represents a
